

RYAN HEDLUND is a solution architect in the public sector practice within IBM Business Intelligence and Performance Management. Since the passage of the American Recovery and Reinvestment Act early this year, Ryan has worked with the IBM team in order to understand both the data required to meet the accountability and transparency guidelines as well as the technology required to collect, report, and transmit data from recipients to the federal government. Ryan has subsequently worked with Cognos technology to develop a flexible and rapidly deployable solution and now works with IBM customers and partners to help governments meet the ARRA accountability requirements.
