## IT WORKSHOP

January 29 | Savannah, Georgia

### CYBER SECURITY – AUDIT SMARTER, NOT HARDER

Technology is omnipresent. Technology is helping businesses work faster, smarter and become more innovative. But the same technology is introducing more security risks. Organizations are deploying security technologies to mitigate the security risks and implement continuous monitoring of these risks. Audit departments within organizations are planning to conduct more technology audits than ever before. They are looking to automate their audits. They are looking for newer, smarter audit tools. But before we go any further to identify any new tools, let's look at the same continuous monitoring tools already deployed within the organizations, which could help the auditors as well.

The session will discuss the following areas:

- Asset Inventory
- Security Information Event Management
- Identity and Access Management
- Network Security
- Mobile Device Management

Speaker: Sajay Rai, CPA, CISSP, CISM
